

## **Bental Industries to Supply Motors for NBC systems for the Mine Resistant Ambush Protected (MRAP) Project**

*Bental to supply over \$10 million in motors for air-condition and NBC ventilation systems for this project*

Israel, march , 2008 - Bental Industries Ltd., Israel's Motion Systems House for defense and commercial applications will supply motors for air-condition and NBC protection systems for the MRAP project.

The motors will be supplied by Bental Industries Ltd. throughout 2008, as additional orders to those supplied in 2007. Bental will supply, in total, more than \$18 million in motors under this project.

As one of the industry's leading suppliers of specialized motion systems for a wide range of armored military vehicles, Bental solutions meet the demands of the most rugged combat conditions. Shmuel Mandel, CEO of Bental Industries commented: "These orders are a testimony not only to superior engineering capabilities, but also to our flexibility to offer the large-scale capacity needed for a project of this scope and our ability to overcome the ramp up need in the production within weeks. We supply over 200 sets a week. Bental have supplied motors and fans for NBC ventilation systems for armored vehicles for many years. This is where we offer a unique advantage, with the flexibility, strength and business expertise to handle projects of any size."

### **About Bental Industries**

Bental Industries specializes in innovative motion technologies such as Brush and Brushless Motors, Permanent Magnet Generators, Electronic Drivers & Controllers, Servo Actuators, Stabilized Gimbal Systems and more. The company is a leading supplier in its field for military, aerospace and industrial companies worldwide. Bental tailors cutting-edge technology and innovative design enables it to effectively respond to today's most challenging market demands. The company's products are integrated into various platforms and applications including: turret & gun control systems for AFVs, UAVs, missiles, jet engines, cryogenic coolers for thermal imaging systems, optical systems, rotational drives for large antennae pedestals, and more.
